The Idea

Privacy Location Sharing

Keep Data in the hands of its Users

Hide Attack Vectors

Keep Data Private

Features

- Cross-Platform Mobile and Desktop Versions
- Decentralized
- End-to-End Encryption
- Ephemeral Telemetry: logs expire and never logged
- Locally Stored
- Multi-Peer

AI Architect

Process

Sender

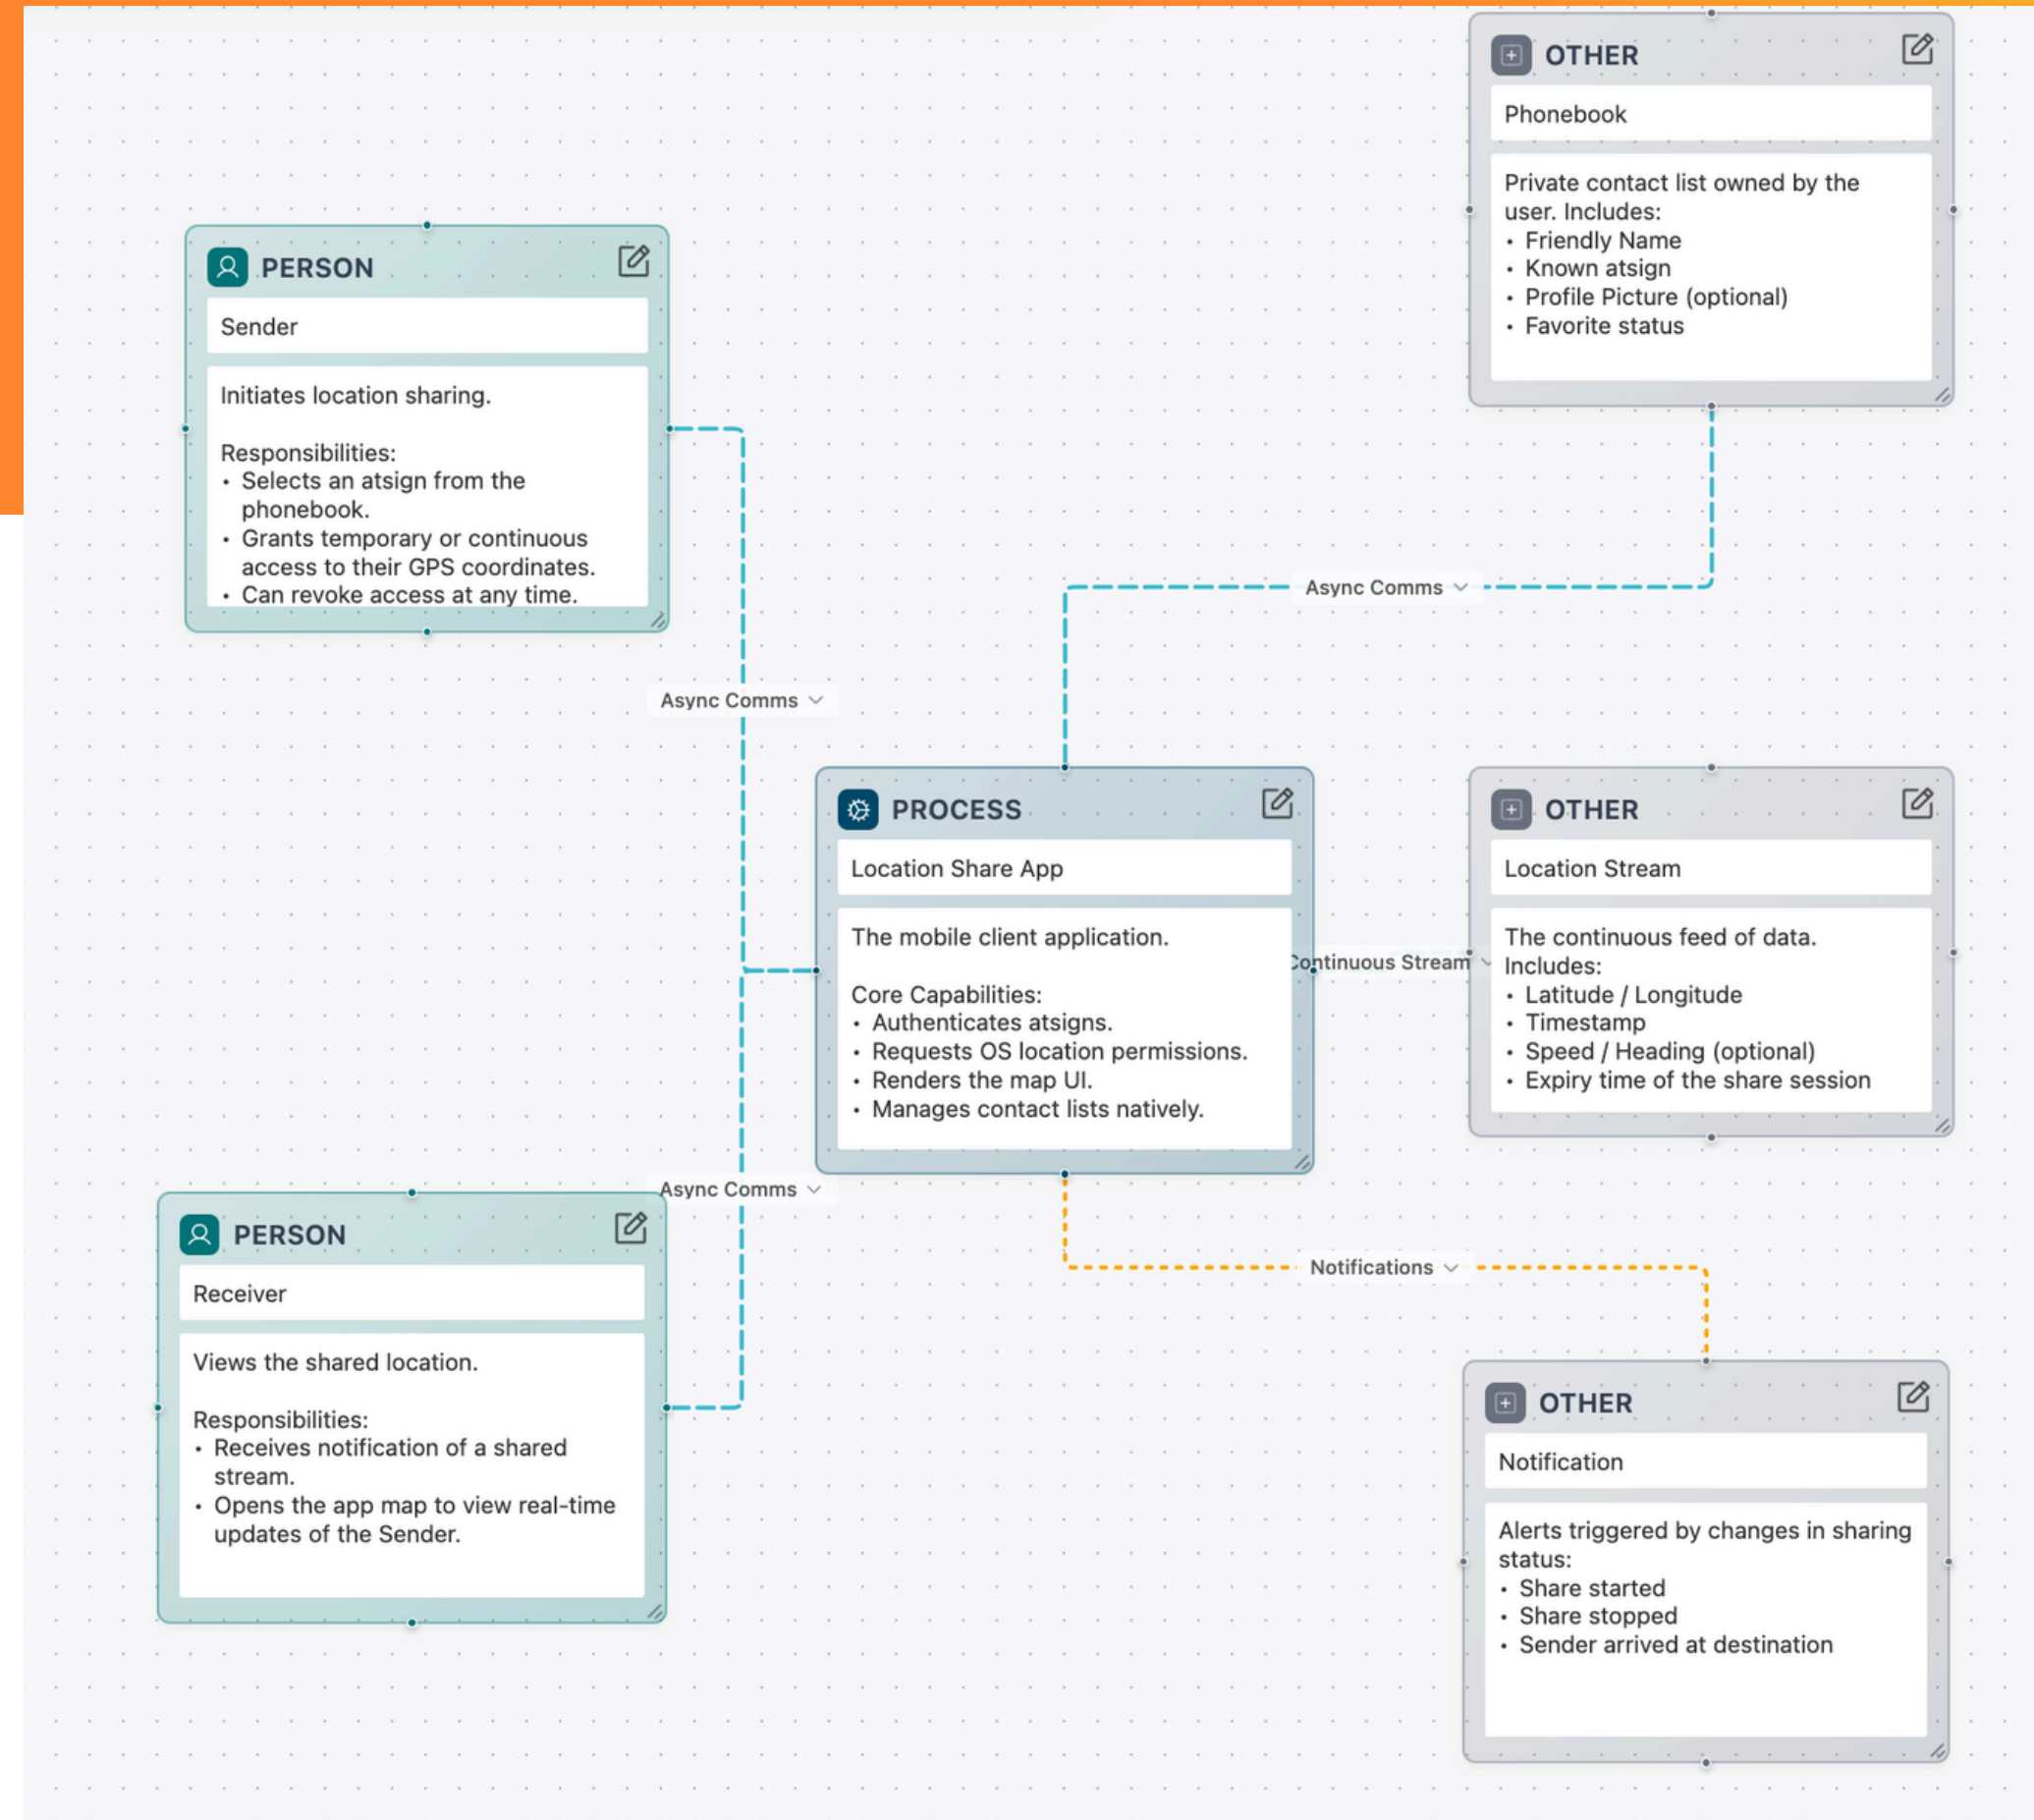

- Initiates process
- Chooses who to share

Location Share App

- Validates AtSigns
- Handles location permissions
- Renders Map UI
- Sends and receives encrypted data

Receiver

- Gets location data

The Tech

Language

- Dart

Framework

- Flutter

Protocol

- Atsign Protocol

Authentication

- at_auth

Map Rendering

- flutter_map

Local Database

- Drift (SQLite)

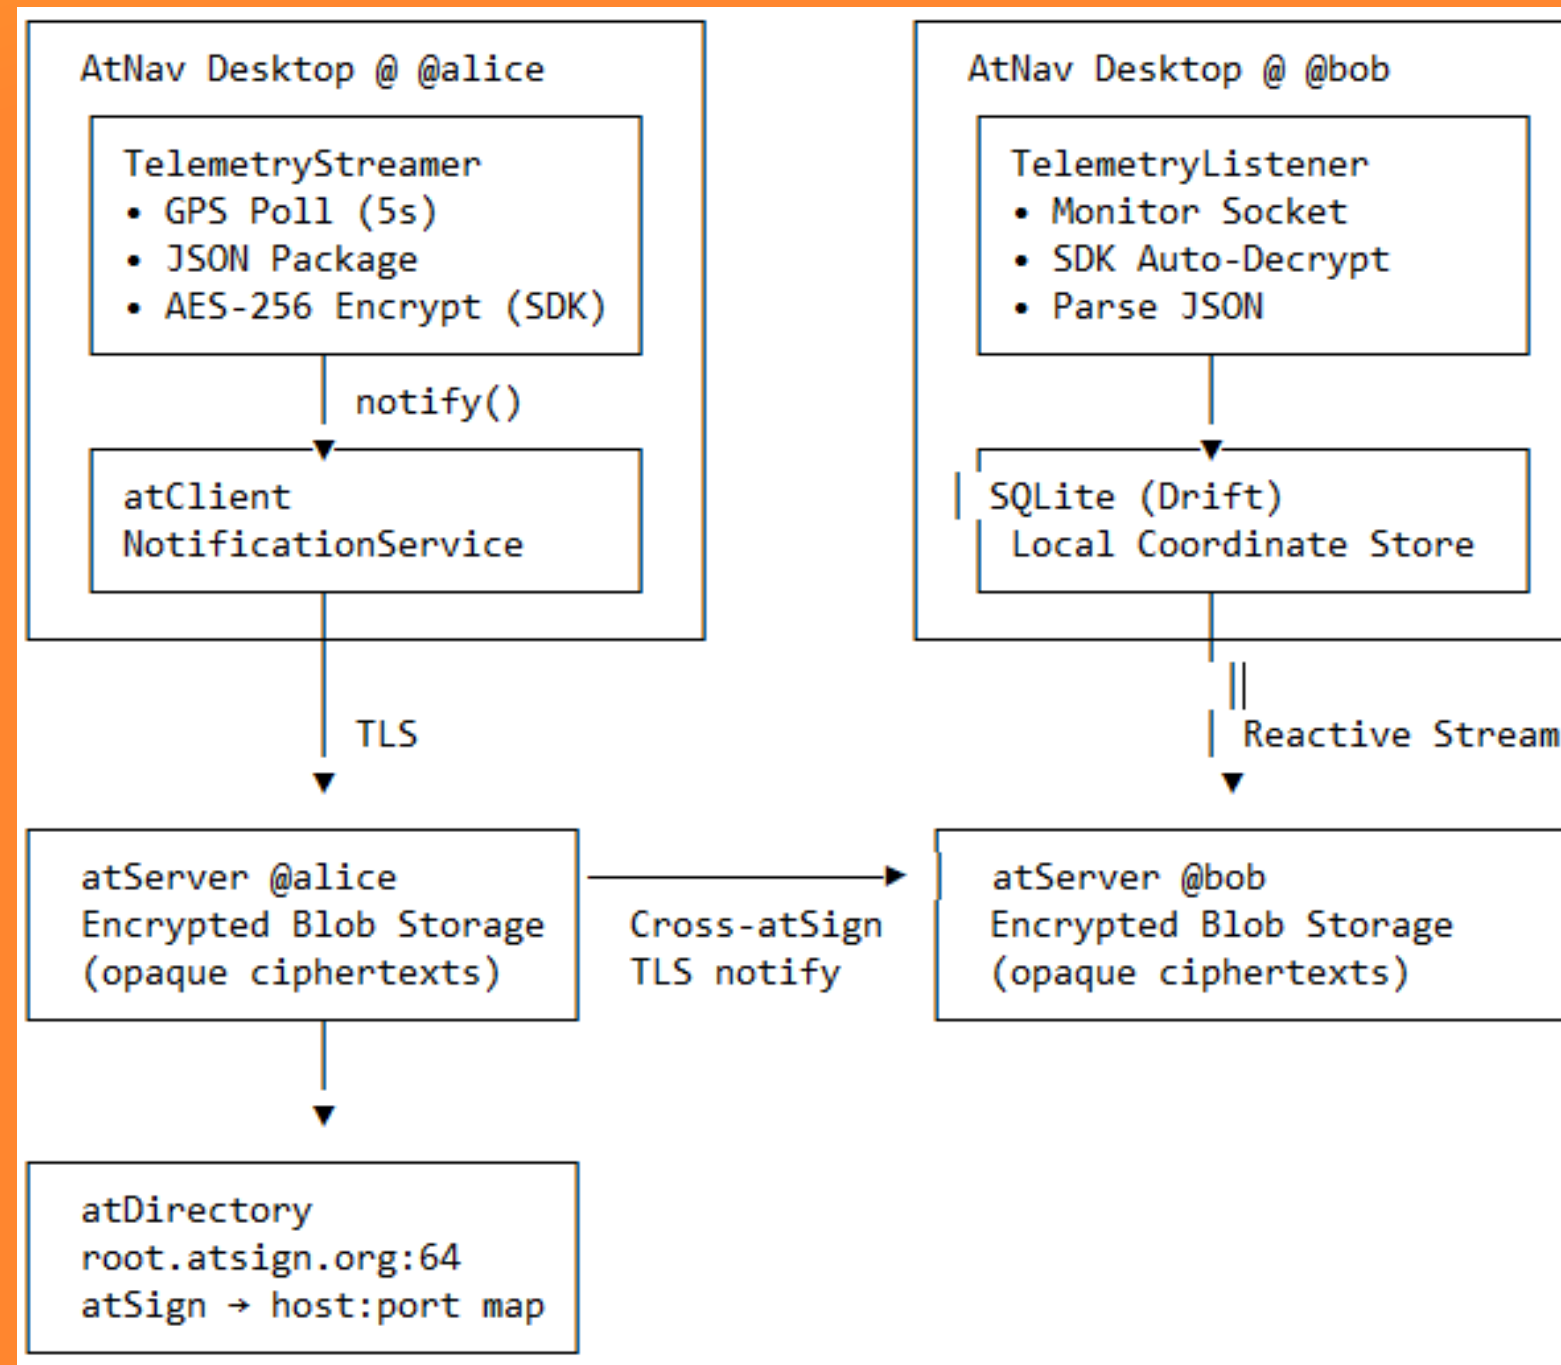

Location

- Geolocator

AI Architect™

System Process

💡 GPS → JSON → AES-256 Encrypt → atServer (opaque blob) → Peer atServer → Monitor → AES-256 Decrypt → SQLite → Map UI

Thank You!
